Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1902 Excerpt: .always contain more calcic than magnesian sulfate, but under the conditions prevailing during the spring of 1900 we find the rule reversed--see analyses XXXVI, XXXVII and XXXVIII. The cause, or causes, of this were evidently not permanent, for within a period of eight days we observe a change, in which the ratio of magnesian to calcic sulfate, in the water of well A. falls from 2:1 to 1.2:1, a ratio which had already been found for these salts immediately after irrigation. In the drain water taken on the same date, April 2 -, 1900, we observe the usual ratio between these salts. The drain water is at all times different from the ground water, and too much stress should not be placed upon the ratio of these salts observed in it. Its chief value, in this case, is to show that, though the conditions in regard to temperature, water supply, etc., were general, they have produced no noticeable effect upon the kind or relative quantities of the salts carried in the drain water. 41. The water of well A, on April 9, 1900, was intermediate in the character of the salts held in solution between the alkali-incrustations forming on this soil, under favorable conditions, and the water usually present in the well. It differed from the former in having less sodic sulfate, and from the latter in carrying less calcic sulfate and very much more magnesian and sodic sulfates. These facts do not seem to be...
