This is of particular concern for certain occupational groups that are exposed to such hazardous substances over many years at much higher concentrations than the general population. It is well-documented that exposure to some chemical substances and to radiation at high doses causes cancer and genetic mutations (changes in genetic information). Not all mutations, however, cause disease (figure 1-4). The relationships between genes, mutations, and disease are becoming clearer with the development of molecular techniques. However, until the health effects of radiation-Photo credit: U. S.
