In the case of those species supplied with a vascular system, it is shown that the blood-vessels take no part in the reactionary process (phagocytosis), which M. Metchnikoff believes to be the essential element in inflammatory, action. As we ascend higher in the scale of animal existence, it is interesting to note how the phagocytes become specialized and located in different parts of the economy. In the case of worms it is shown that the mesodermic phagocytes are represented by the cells suspended in the perivisceral liquid or by the endothelial cells of the peritoneum; and in this case the strife between the parasite and the phagocytes goes on while the blood-vessels, developed to a high degree in the annelida, remain completely inactive, presenting neither visible changes of volume nor secretion of the reddish colored plasma. Among the invertebrates we find leucocytes with...
