American Geophysical Union, United States, 2007. Paperback. Book Condition: New. 274 x 224 mm. Language: English . Brand New Book. Groundwater is a critical resource and the Principal source of drinking water for over 1.5 billion people. In 2001, the National Research Council cited as a grand challenge our need to understand the processes that control water movement in the subsurface. This volume faces that challenge in terms of data integration between complex, multi-scale hydrologic processes, and their links to other physical, chemical, and biological processes at multiple scales. Subsurface Hydrology: Data Integration for Properties and Processes presents the current state of the science in four aspects: Approaches to hydrologic data integration Data integration for characterization of hydrologic properties Data integration for understanding hydrologic processes Meta-analysis of current interpretations Scientists and researchers in the field, the laboratory, and the classroom will find this work an important resource in advancing our understanding of subsurface water movement.
